How to Use

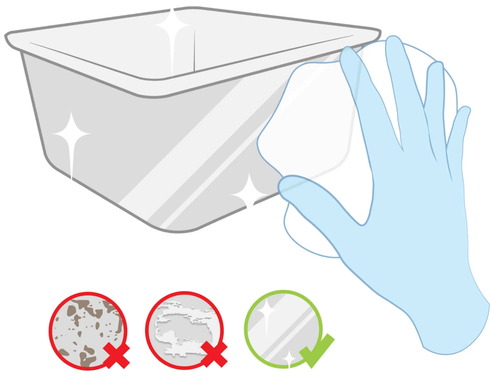
Be Remarkable.

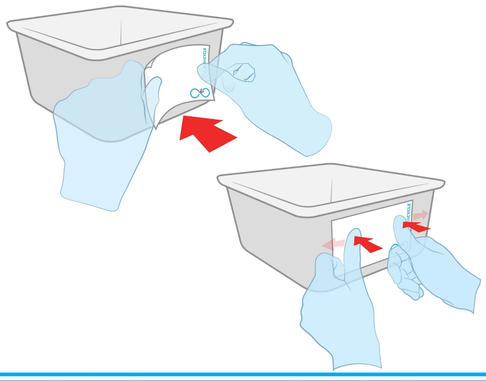
Step 1. Clean your Bins

· Clean every bin to remove any mold, residue, and gunk that has built up over the years. (It's overdue anyway).

· A smooth clean surface ensures a maximum strength seal.

· *Tip: Use cleaning alcohols and abrasive scrubbers for fast results.*





Step 2. Apply the Label

· Our patented waterlock technology is activated by applying the center of the label first.

· Apply outward pressure from the center, minimizing air bubbles or folds.

· For maximum hold, allow 24-48 hours in a dry environment for the adhesive to form a full waterlock with the bin.

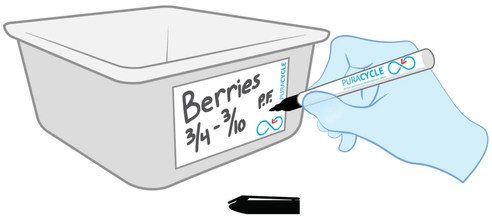
· *To avoid delays, apply your labels before closing to allow the adhesion to fully "set" overnight.*

Step 3. Write on the Label

· Write on the label with the cooperatively engineered Puracycle Foodservice Marker.

· The ink stays on through steam, freezing water, steam, condensation, and boiling water, but erases evenly in the dishroom with friction.

· *Tip: For best results, allow 20 seconds for the ink to dry before water submersion or physical contact.*



Step 4. Serve Safely

· Load your food and serve confidently.

· The bright white label and stark black marker provide excellent contrast for easy reading.

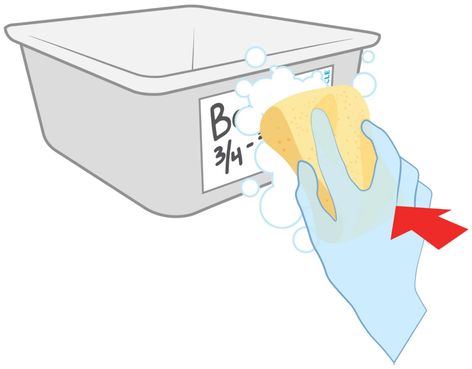
· *Tip: Customize your label to have the exact text your operation requires!*

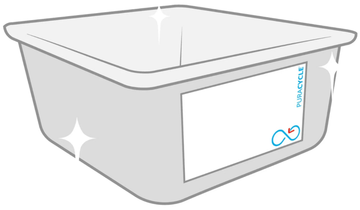
Step 5. Erase in the Dishroom

· Erase the ink with friction in the dishroom.

· Less pressure is needed the more abrasive your cleaning cloth is.

· *Tip: It is common for dishroom employees to attempt to remove Puracycle labels during this step. We are happy to replace any labels that are peeled off during your transition period.*





Step 6. Run it Back!

· Congratulations! You have completed your first cycle.

· Repeat steps 3 - 6 hundreds of more times.

· At the end of the lifecycle, simply peel off the label and apply a new one.

· *Tip: Contact us if any labels fail before one-year or 500 uses for a free replacement.*
