

SPOUT INSTALLATION - STORE 'N POUR

PRODUCT NUMBER: PS501N, PS601N, PS701B, PS801B, PS103, PS103AT

Store 'N Pour spouts are engineered for a tight and leak-free fit; for this reason, the spout can be difficult to install in the neck if proper steps are not followed. The spout should be installed in the following manner:

Step One (1)

Hold the opening of the neck under hot tap water for one minute. Temperature of the water should be hot enough to allow the spout to be snapped into the neck, but not hot enough to scald the skin.

Step Two (2)

Place the trailing edge of the spout (opposite the side with the opening) into the recessed edge of the spout.

Step Three (3)

Press the spout into place using the heel of the hand on the pour spout; spout is seated when it snaps into place.
