## What's New

## What's New in the TI-84 Plus CE Reference Guide:

All items listed are new or updated entries in the Reference Guide for the TI-84 Plus CE Graphing Calculator.

## Piecewise

- New piecewise function to support entry of functions as they are seen in textbook. This command can be found in math MATH B:piecewise(.

| NORMAL FLOAT AUTO REAL Radian mp | 1 |
| :---: | :---: |
| Plot1 Plot2 Plot3 $\begin{aligned} & \mathbf{N Y}_{1}=\left\{\begin{array}{l} X^{2}-1 ; X \leq 2 \\ X+1 ; X>2 \end{array}\right. \\ & V_{2}= \\ & \mathbf{N Y} Y_{3}= \\ & \text { VY }_{4}= \\ & \mathbf{N Y}_{5}= \\ & \mathbf{N Y}= \\ & \mathbf{N Y}= \end{aligned}$ |  |

- New CONDITIONS submenu in 2nd [test] supports faster entry of intervals for piecewise functions.
- Available for use in all function graphing modes and all split screen modes.

## Introduction

In this Reference Guide you will find the following information:

- CATALOG, Strings, Hyperbolic Functions - Includes instructions on browsing, using, entering strings, and other functions in the CATALOG.
- Commands and Functions Listing - Includes an alphabetical listing of all CATALOG items, referencing:
- Function or Instruction/Arguments
- Results
- Key or Keys/Menu or Screen/Item
- Arithmetic Operations, Test Relations, and Symbols - Items whose names are not alphabetic (such as + , !, and $>$ ).
- Error Messages - Includes a listing of error types with possible causes and suggested remedies.

## CATALOG, Strings, Hyperbolic Functions

## What Is the CATALOG?

The CATALOG is an alphabetical list of all functions and instructions on the TI-84 Plus CE. You also can access each CATALOG item from a menu or the keyboard, except:

- The six string functions
- The six hyperbolic functions
- The solve( instruction without the equation solver editor
- The inferential stat functions without the inferential stat editors

Note: The only CATALOG programming commands you can execute from the home screen are GetCalc(, Get(, and Send(.

## Browsing the TI-84 Plus CE Catalog

## Selecting an Item from the CATALOG

To browse and select a CATALOG item, follow these steps.

1. Press [2nd [catalog]to display the CATALOG.
Mormal float auto real radian mp al

CATALOG

- abs $($
and
angle(
ANOVA(
Ans
Archive
Asm(
AsmComp (
Asm84CEPrgm
The in the first column is the selection cursor.

2. Press $\square$ or to scroll the CATALOG until the selection cursor points to the item you want.

- To jump to the first item beginning with a particular letter, press that letter; alpha-lock is on.
- Items that begin with a number are in alphabetical order according to the first letter after the number. For example, 2-PropzTest( is among the items that begin with the letter $\mathbf{P}$.
- Functions that appear as symbols, such as,$+{ }^{-1}$, <, and $\sqrt{ }$ (, follow the last item that begins with $\mathbf{Z}$. To jump to the first symbol, !, press [ $\theta$ ].

3. Press enter to paste the item to the current screen.

## Note:

- From the top of the CATALOG menu, press $\Delta$ to move to the bottom. From the bottom, press to move to the top.
- When your TI-84 Plus CE is in MathPrint ${ }^{\text {TM }}$ mode, many functions will paste the MathPrint ${ }^{\text {TM }}$ template on the home screen. For example, abs( pastes the absolute value template on the home screen instead of abs(.

## Using Catalog Help

## Displaying Catalog Help

You can display Catalog Help arguments for functions in two ways:

- Using an alpha/numeric function listing in the catalog (e.g, 2nd [catalog]).
- Using the functions listed in certain menus (e.g, math).

Catalog Help lists the valid arguments for the function under the edit line. Arguments in brackets are optional.

1. Display the menu that contains the function.
2. Use $\triangle$ and/or $\square$ to move the cursor to the function.
3. Press $\square$ to display arguments for the function. The cursor is on the function edit line.

## Note:

- The catalog (2nd [catalog]) is displayed in alphabetical order. When you display the catalog, the alpha-lock is turned on. Press the first letter of the function name to skip function names that come before it alphabetically. Use $\Delta$ and/or $\nabla$ to move the cursor to the function.
- Not all catalog functions have associated arguments. If the function does not require an argument, Catalog Help displays the message "No arguments required for this item."

## Catalog Help Commands

- Select MORE (if available) to display more arguments for the function.
Normal float futo real radifin Mp
dime $C$ CATRLOG HELP

CATALOG HELP
Disp $\quad$ -
(listname)
[valueA, valueB, valueC,..., value n]
(matrixname)
no arguments
MORE $\quad$ PRASTEI ESC $\quad$ |PRSTE] ESC
- Use shortcut menus alpha [f1] through [f4] through for argument values if available.

- Enter your argument values on the function edit line, and then select PASTE to paste the function and the argument values you entered.

Note: You can paste to most cursor locations.

| Cormal float auto real radian MP |
| :--- |
| CATRLOG HELP |
| LinReg $(a+b x) L_{1}, L_{2}, Y_{3} \square$ |

[Xlistname, Ylistname
,frealist, regequ]

- Select ESC to exit the Catalog Help screen.

## Entering and Using Strings

## What Is a String?

A string is a sequence of characters that you enclose within quotation marks. On the TI-84 Plus CE, a string has two primary applications.

- It defines text to be displayed in a program.
- It accepts input from the keyboard in a program.

Characters are the units that you combine to form a string.

- Each number, letter, and space counts as one character.
- Each instruction or function name, such as $\sin ($ or $\cos ($, counts as one character; the TI-84 Plus CE interprets each instruction or function name as one character.

## Entering a String

To enter a string on a blank line on the home screen or in a program, follow these steps.

1. Press alpha ["] to indicate the beginning of the string.
2. Enter the characters that comprise the string.

- Use any combination of numbers, letters, function names, or instruction names to create the string.
- To enter a blank space, press alpha [ [ـ].
- To enter several alpha characters in a row, press alpha [A-lock] to activate alphalock.

3. Press alpha ["] to indicate the end of the string.
"string"
4. Press enter. On the home screen, the string is displayed on the next line without quotations. An ellipsis (...) indicates that the string continues beyond the screen. To scroll to see the entire string, press $\square$ and $\square$.

Note: A string must be enclosed in quotation marks. The quotation marks do not count as string characters.

## Storing Strings to String Variables

## String Variables

The TI-84 Plus CE, has 10 variables to which you can store strings. You can use string variables with string functions and instructions.

To display the VARS STRING menu, follow these steps.

1. Press vars to display the VARS menu. Move the cursor to 7:String.

| MORMAL FLOAT |
| :--- |
| VUTO REAL RADIAN MP |
| VARS Y-VARS COLOR |
| 1:Window... |
| 2:Zoom... |
| 3:GDB... |
| 4:Picture \& Background... |
| 5:Statistics... |
| 6:Table... |
| 7:String... |

2. Press enter to display the STRING secondary menu.
```
NORMAL FLOAT GUTO REAL RADIAN MP \
```

STRING
1:Str1
2:Str2
3:Str3
4:Str4
5:Str5
6:Str6
7:Str7
8:Str8
$9 \downarrow$ Str9

## Storing a String to a String Variable

To store a string to a string variable, follow these steps.

1. Press alpha ["], enter the string, and press alpha ["].
2. Press sto $\rightarrow$.
3. Press vars $\mathbf{7}$ to display the VARS STRING menu.
4. Select the string variable (from Str1 to Str9, or Str0) to which you want to store the string.

## STRING

1:Str1
2:Str2
3:Str3
4:Str4
5:Str5
6:Str6
7:Str7
8:Str8
9 $\downarrow$ Str9
The string variable is pasted to the current cursor location, next to the store symbol $(\rightarrow)$.
5. Press enter to store the string to the string variable. On the home screen, the stored string is displayed on the next line without quotation marks.

## Displaying the Contents of a String Variable

To display the contents of a string variable on the home screen, select the string variable from the VARS STRING menu, and then press enter. The string is displayed.

NORMAL FLOAT AUTO REAL RADIAN MP

## Str2

HELCㄴ
$\square$

## String Functions and Instructions in the CATALOG

## Displaying String Functions and Instructions in the CATALOG

String functions and instructions are available only from the CATALOG. The table below lists the string functions and instructions in the order in which they appear among the other CATALOG menu items. The ellipses in the table indicate the presence of additional CATALOG items.

## CATALOG

| Equ String( | Converts an equation to a string. |
| :--- | :--- |
| $\ldots$ | Converts a string to an expression. |
| expr( | Returns a character's place number. |
| $\ldots$ |  |
| inString <br> $\ldots$ | Returns a string's character length. |
| length( | Converts a string to an equation. |
| $\ldots$ | Returns a string subset as a string. |

## Concatenation

To concatenate two or more strings, follow these steps.

1. Enter string1, which can be a string or string name.
2. Press $\dagger$.
3. Enter string2, which can be a string or string name. If necessary, press $\dagger$ and enter string3, and so on.
string1+string2+string3...
4. Press enter to display the strings as a single string.

## Selecting a String Function from the CATALOG

To select a string function or instruction and paste it to the current screen, follow the steps for selecting an item from the CATALOG.

## Equistring(

Equistring( converts an equation to a string. The equation must be store in a VARS Y-VARS variable. Y $n$ contains the equation. Str $n$ (from Str1 to Str9, or Str0) is the string variable to which you want the equation to be stored.

Equ>String( $\mathbf{Y} n$, Str $n$ )

expr(
expr( converts the character string contained in string to an expression and executes the expression. string can be a string or a string variable.
expr(string)

| normal float auto real radian mp П | Normal float muto real radian mp П |
| :---: | :---: |
| $2 \rightarrow X$ | $\left.\operatorname{expr}\left(" 1+2+x^{2}\right)^{\prime}\right)$ |
| $\because 5 \times \because \rightarrow S t r 1$ <br> $5 \times$ | 7. |
| expr $\operatorname{Str1}) \rightarrow$ A |  |
| $10 .$ |  |
| ..................................... 10. |  |

## inString(

inString( returns the character position in string of the first character of substring. string can be a string or a string variable. start is an optional character position at which to start the search; the default is 1 .
inString(string,substring[,start])

Note: If string does not contain substring, or start is greater than the length of string, inString( returns 0.

## length(

length( returns the number of characters in string. string can be a string or string variable.

Note: An instruction or function name, such as $\boldsymbol{\operatorname { s i n }}$ ( or $\boldsymbol{\operatorname { c o s }}$ (, counts as one character.
length(string)

## String) Equ(

String) Equ( converts string into an equation and stores the equation to Yn. string can be a string or string variable. String)Equ( is the inverse of EqulString(.

String> Equ(string, $\mathbf{Y} n$ )

sub(
sub( returns a string that is a subset of an existing string. string can be a string or a string variable. begin is the position number of the first character of the subset. length is the number of characters in the subset.
sub(string,begin,length)
normal float huto real radian mp П

## Entering a Function to Graph during Program Execution

In a program, you can enter a function to graph during program execution using these commands.
Mormal float ruto real radian mp П

PROGRAM: INPUT
: Input "ENTRY=",Str3
:StringlEqu(Str3, $\mathrm{Y}_{3}$ )
: DispGraph
:
tormal float auto real radian mp П
pr9m INPUT
ENTRY=3X

Note: When you execute this program, enter a function to store to Y 3 at the ENTRY= prompt.

## Hyperbolic Functions in the CATALOG

## Hyperbolic Functions

The hyperbolic functions are available only from the CATALOG. The table below lists the hyperbolic functions in the order in which they appear among the other CATALOG menu items. The ellipses in the table indicate the presence of additional CATALOG items.

| CATALOG |  |
| :--- | :--- |
| $\ldots$ |  |
| $\cosh ($ | Hyperbolic cosine |
| $\cosh ^{-1}($ | Hyperbolic arccosine |
| $\ldots$ |  |
| $\sinh ($ | Hyperbolic sine |
| $\sinh ^{-1}($ | Hyperbolic arcsine |
| $\ldots$ |  |
| $\tanh ^{\tanh ^{-1}( }$ | Hyperbolic tangent |
| Hyperbolic arctangent |  |

$\sinh (, \cosh (, \tanh ($
$\sinh (, \cosh ($, and $\tanh ($ are the hyperbolic functions. Each is valid for real numbers, expressions, and lists.

```
\(\sinh (\) value \()\)
```

$\cosh$ (value)
$\boldsymbol{t a n h}$ (value)
Mormal float ruto real radian mp П
sinh(.5)

โ1.0314131.1.127625965 . 1.1
$\sinh ^{-1}\left(, \cosh ^{-1}\left(, \tanh ^{-1}(\right.\right.$
$\sinh ^{-1}$ ( is the hyperbolic arcsine function. $\cosh ^{-1}$ ( is the hyperbolic arccosine function.
$\boldsymbol{t a n h}^{-1}$ ( is the hyperbolic arctangent function. Each is valid for real numbers,
expressions, and lists.
$\sinh ^{-1}$ (value)
$\cosh ^{-1}$ (value)
$\tanh ^{-1}$ (value)

## Commands and Functions Listing

The purpose of this table of information is to provide a short description with syntax of command arguments as appropriate and menu locations for each command or function in the Catalog listing in the calculator.

This table is useful for executing commands when using the calculator or creating TIBasic programs.

Items whose names are not alphabetic (such as + , !, and $>$ ) are listed in the Arithmetic Operations, Test Relations, and Symbols section. Unless otherwise specified, all examples in this section were performed in the default reset mode, and all variables are assumed to be the default value of 0 .

From the CATALOG, you can paste any function or command to the home screen or to a command line in the program editor.

The same syntax information for function and command arguments below is available on the calculator and also in the TI Connect ${ }^{\text {TM }}$ CE Program Editor.

- On the calculator, pressing [+] when a function or command is highlighted in the menu listing will display the Catalog Help syntax editor to assist your entries.
- Using TI Connect ${ }^{\text {TM }}$ CE Program Editor, the catalog listing also displays the syntax of the arguments for functions and commands.

Note that some functions and commands are only valid when executed in a TI-Basic program and not from the home screen.

The items in this table appear in the same order as they appear in the CATALOG (2nd [catalog].)

In the table below, the $\boldsymbol{\dagger}$ symbol indicates either keystrokes or certain commands which are only available in the Program Editor mode on the calculator. Press prgm and select to EDIT an existing program or NEW to start a new program to set the calculator in the Program Edit mode.

Some arguments are optional. Optional arguments will be indicated within [ ] in the syntax help given in the table below. [ ] are not symbols on the calculator and are not to be typed in. They are used here only to indicate an optional argument.

On the calculator, functions and commands paste as "tokens." This means they paste as one character and not as individual letters, symbols and spaces. Do not attempt to type in any function or command on the calculator. Just paste the token from menu locations. Watch the cursor jump over tokens as you edit to get a better understanding of tokens.

In TI Connect ${ }^{\text {TM }}$ CE Program Editor, you can "feel" the same experience of pasting tokens when using the Catalog tree provided in that editor. You also can type in the functions and commands if you know the correct format and syntax. TI Connect ${ }^{\text {TM }}$ CE "tokenizes" the functions and commands when you send the program to the calculator. However, you must type in the functions and commands exactly as the tokens. Note that some commands will have spaces as part of the token which you might not see. For example, Pause command as a token has a space at the end. Once you send the
program to the calculator, you can run the program and if there are any syntax errors, you can fix the issues on either the calculator or in TI Connect ${ }^{T M}$ CE Program Editor.

COS
Returns cosine of a real number, expression, or list.
$\cos ^{-1}($
$\cos ^{-1}$ (value)

Returns arccosine of a real number, expression, or list.
$\cosh$ (
$\cosh ($ value)
2nd

```
\mp@subsup{\operatorname{cosh}}{}{-1}
cosh-1 (value)
```

[CATALOG]
$\cosh ^{-1}($

## CubicReg

CubicReg [Xlistname,Ylistname,freqlist,regequ]
Fits a cubic regression model to Xlistname and Ylistname with frequency freqlist, and stores the regression equation to regequ.

| cumSum( | 2nd [ [IST] |
| :--- | ---: |
| cumSum (list ) | OPS |
| Returns a list of the cumulative sums of the elements in $l i s t$, starting with <br> the first element. | 6:cumSum( |

cumSum(
cumSum(matrix)
2nd [MATRIX]
MATH
Returns a matrix of the cumulative sums of matrix elements. Each element in the returned matrix is a cumulative sum of a matrix column 0:cumSum( from top to bottom.

## dayOfWk(

dayOfWk(year,month,day)
2nd [CATALOG] dayOfWk( 1:Sunday 2:Monday 3:Tuesday...

## dbd(

dbd(date1,date2) APPS

Calculates the number of days between date 1 and date 2 using the actual-day-count method.

| DEC Answers |  |
| :--- | ---: |
| DEC | MODE |
| Displays answers as integers or decimal numbers. | Answers: |

## DetectAsymOff

## DetectAsymOff

Turns off checks for rational function asymptotes when graphing.

+ 2nd [FORMAT]
DetectAsymOff Impacts graph speed. Does not perform extra calculations to detect asymptotes pixel to pixel while graphing. Pixels will connect across the screen even across an asymptote.

## DetectAsymOn

DetectAsymOn

+ 2nd [FORMAT]
DetectAsymOn

Turns on checks for rational function asymptotes when graphing. Impacts graph speed. Performs more calculations and will not connect pixels across an asymptote on a graph.

## DiagnosticOff

DiagnosticOff
Sets diagnostics-off mode; $\mathbf{r}, \mathbf{r}^{2}$, and $\mathbf{R}^{2}$ are not displayed as regression model results.

2nd [CATALOG]
DiagnosticOff

## DiagnosticOn

DiagnosticOn
2nd [CATALOG]
Sets diagnostics-on mode; $\mathbf{r}, \mathbf{r}^{2}$, and $\mathbf{R}^{2}$ are displayed as regression model results.

## GetCalc(

CE.)

## getDate

getDate
2nd [CATALOG]
getDate
Returns a list giving the date according to the current value of the clock. The list is in \{year,month,day\} format.

## getDtFmt

getDtFmt
2nd
Returns an integer representing the date format that is currently set on the [CATALOG] device.
$1=M / D / Y$
$2=D / M / Y$
$3=Y / M / D$

## getDtStr(

getDtStr(integer)
2nd
[CATALOG]
Returns a string of the current date in the format specified by integer, where:
$1=M / D / Y$
$2=D / M / Y$
$3=Y / M / D$

## getTime

## getTime

Returns a list giving the time according to the current value of the clock. getTime The list is in $\{$ hour, minute,second $\}$ format. The time is returned in the 24 hour format.

## getTmFmt

getTmFmt
Returns an integer representing the clock time format that is currently set on the device.
$12=12$ hour format
$24=24$ hour format

## getTmStr(

getTmStr(integer)
Returns a string of the current clock time in the format specified by
$12=12$ hour format
$24=24$ hour format
getKey
getKey

+ PRGM
I/O
Returns the key code for the current keystroke, or $\mathbf{0}$, if no key is pressed.

Else to End if condition $=0$ (false).

| imag( | MATH |
| :--- | ---: |
| imag(value) | CMPLX |
| Returns the imaginary (non-real) part of a complex number or list of | 3:imag( |
| complex numbers. |  |

| inBinom( |  |
| :--- | ---: |
| inBinom(area, trial, p) | 2nd [DISTR] |
| The inverse binomial cumulative distribution function results in the <br> minimum number of successes, such that the cumulative probability for <br> that minimum number of successes $\geq$ the given cumulative probability | DISTR |
| (area). If more information is needed, also find the binomcdf for the |  |
| result from invBinom( as shown below for a full a analysis. | C:invBinom( |
| Details: |  |

Assume the toss of a fair coin 30 times. What is the minimum number of heads you must observe such that the cumulative probability for that number of observed heads is at least 0.95 ?

The results on the screen first show that the minimum number of successes to obtain at least the given cumulative probability of 0.95 is 19. Next, the cumulative probability for up to 19 is computed using binomcdf( and is approximately 0.9506314271 which meets the criteria of $0.9506314271 \geq 0.95$

| MORMaL FLOAT AUTO REAL RADIAN MP |
| :---: |
| invBinom(.95,30,.5) |
| binomcdf(30,.5,19) <br> 0.9506314271 |

## Alternate Method:

Set $\mathrm{Y} 1=\operatorname{binomcdf}(30,0.5, \mathrm{X})$ and use the table of values (starting at 0 and increment by 1) to find when the cumulative probability is at or just above the given cumulative probability. This gives you a view of all values to make decisions. For this example, search in the table to find the cumulative probability just larger than 0.95. Again, the number of
inBinom(
successes is 19.

## IndpntAsk

IndpntAsk
Sets table to ask for independent-variable values.

| IndpntAuto |  |
| :--- | ---: |
| IndpntAuto | + 2nd] |
| Sets table to generate independent-variable values automatically. | [TBLSET] |
|  | Indpnt: |

| LnReg [Xlistname,Ylistname,freqlist,regequ] | STAT] |
| Fits a logarithmic regression model to Xlistname and Ylistname with | CALC |
| frequency freqlist, and stores the regression equation to regequ. | 9:LnReg |

$\log ($
$\log ($ value $)$
LOG

Returns logarithm of a real or complex number, expression, or list.
logBASE(
logBASE(value, base)

| Returns the logarithm of a specifed value determined from a specified |
| :--- |
| base: logBASE(value, base). |$\quad$ A: logBASE

## Logistic

Logistic [Xlistname,Ylistname,freqlist,regequ]
Fits a logistic regression model to Xlistname and Ylistname with frequency freqlist, and stores the regression equation to regequ.

CALC<br>B:Logistic

## Manual-Fit

Manual-Fit[equname,color\#,line style\#]
Fits a linear equation to a scatter plot with specified color and line style.
Color\#: 10-24 or color name pasted from [vars] COLOR.
line style \#: 1-4.

## MATHPRINT

## MATHPRINT

Displays most entries and answers the way they are displayed in
textbooks, such as $\frac{1}{2}+\frac{3}{4}$.
MATHPRINT

| Matr)list( |  |
| :---: | :---: |

| 2-PropZInt( | + STAT |
| :--- | ---: |
| 2-PropZInt( $x 1, n 1, x 2, n 2[$, confidence level $]$ ) |  |
| Computes a two-proportion $z$ confidence interval. | TESTS |
|  | B:2-PropZInt( |

## 1-PropZTest(

1-PropZTest(p0,x,n[,alternative,drawflag, color\#])

+ STAT
TESTS
5:1-PropZTest

Computes a one-proportion $z$ test. alternative $=\mathbf{- 1}$ is <; alternative $=\mathbf{0}$ is
; alternative $=\mathbf{1}$ is $>$. drawflag $=\mathbf{1}$ draws results; drawflag $=\mathbf{0}$
5:1-PropZTest
calculates results.
Color\#: 10-24 or color name pasted from [vars] COLOR.

## 2-PropZTest(

2-PropZTest(x1,n1,x2,n2[,alternative,drawflag, color\#])
Computes a two-proportion $z$ test. alternative $=\mathbf{- 1}$ is <; alternative $=\mathbf{0}$ is
; alternative $=\mathbf{1}$ is $>$. drawflag=1 draws results; drawflag=0

+ STAT TESTS 6:2-PropZTest calculates results.
Color\#: 10-24 or color name pasted from [vars] COLOR.

## Pt-Change(

## Pt-Change ( $x, y[$, color\#] $)$

Toggles a point on or off at $(x, y)$ on the graph area. Off will be in the Background color and On will be the specified
Color\#: 10-24 or color name pasted from [vars] COLOR.

## Pt-Off(

Pt-Off( $x, y[, m a r k])$

$$
\begin{array}{r}
\text { 2nd [DRAW] } \\
\text { POINTS } \\
\text { 2:Pt-Off( }
\end{array}
$$

Erases a point at $(x, y)$ on the graph area using mark. The Off state may be the background color determined by the ImageVar or color setting.
Colort: 10-24 or color name pasted from [vars] COLOR.

## Pt-On(

Pt-On( $x, y[$,mark, color\#] $)$
Draws a point at $(x, y)$ on the graph area using mark and the specified POINTS color\#.

Color\#: 10-24 or color name pasted from [vars] COLOR.

## PwrReg

PwrReg [Xlistname,Ylistname,freqlist,regequ]
Fits a power regression model to Xlistname and Ylistname with frequency freqlist, and stores the regression equation to regequ.

## Pxl-Change(

Pxl-Change(row,column[,color\#])
2nd [DRAW] POINTS

6:Pxl-Change

Toggles On to Off in the graph area: Off will display the set Background Image Var or Color.

Colort: 10-24 or color name pasted from [vars] COLOR.

## Pxl-Off(

PxI-Off(row,column)
2nd [DRAW]
POINTS
5:Pxl-Off(

## Pxl-On(

PxI-On(row,column[,color\#])
Draws pixel on the graph area at (row,column) in the specified color.
Color\#: 10-24 or color name pasted from [vars] COLOR.

## pxl-Test(

pxl-Test(row,column)
2nd [DRAW]
Returns 1 if pixel (row, column) is on, 0 if it is off;

## Pr Rx

$\mathrm{P} \boldsymbol{\mathrm { Rx }}(r, \theta)$
2nd [ANGLE]
ANGLE
Returns $\mathbf{X}$, given polar coordinates $r$ and $\theta$ or a list of polar coordinates.

| P>Ryl |  |
| :---: | :---: |
| P> $\mathrm{Ry}(r, \theta)$ | 2nd [ANGLE] |
| Returns $\mathbf{Y}$, given polar coordinates $r$ and $\theta$ or a list of polar coord | ANGLE |
| Returns Y, given polar coordinates $r$ and $\theta$ or a list of polar coor | 8:P > Ryl |

| QuadReg |  |
| :--- | ---: |
| QuadReg [Xlistname,Ylistname,freqlist,regequ] | STAT] |
| Fits a quadratic regression model to Xlistname and Ylistname with <br> frequency freqlist, and stores the regression equation to regequ. | 5:QuadReg |

QuartReg [Xlistname,Ylistname,freqlist,regequ]

STAT
CALC
7:QuartReg

## $R$

| Radian |  |
| :--- | ---: |
| Radian | + MODE |
| Sets radian angle mode. | Radian |

| rand |  |
| :--- | ---: |
| rand[( numtrials $)$ ] | [MATH] |
| Return a random number between 0 and 1 for a specified number of | PRB |
| trials numtrials. | $1:$ :rand |

| randBin( |  |
| :--- | ---: |
| randBin( (numtrials,prob[,numsimulations $]$ ) | [MATH] |
| Generates and displays a random real number from a specified Binomial <br> distribution. | 7:randBin( |

## randInt(

randInt( lower,upper [,numtrials])
Generates and displays a random integer within a range specified by lower and upper integer bounds for a specified number of trials 5:randInt( numtrials.

## randIntNoRep(

## randIntNoRep(lowerint,upperint [,numelements])

Returns a random ordered list of integers from a lower integer to an PRB upper integer which may include the lower integer and upper integer. 8:randIntNoRep( If the optional argument numelements is specified, the first numelements are listed. The first numelements term in the list of random integers are displayed.

| randM( |  |
| :--- | ---: |
| randM(rows, columns) | 2nd] |
| Returns a random matrix of rows $\times$ columns. | [MATRIX] |
| Max rows $x$ columns $=400$ matrix elements. | MATH |
|  | 6:randM( |

| randNorm( |  |
| :--- | ---: |
| randNorm( $\mu, \sigma[$, numtrials $]$ ) | MATH] |
| Generates and displays a random real number from a specified Normal <br> distribution specified by $\mu$ and $\sigma$ for a specified number of trials <br> numtrials. | 6:randNorm( |

$\mathbf{r} \mathbf{e}^{\wedge} \theta i$
$\mathbf{r} \mathbf{e}^{\wedge} \theta i$

Sets the mode to polar complex number mode ( $\left.\mathbf{r} e^{\wedge} \theta i\right)$.

| Real |
| :--- |
| Real |
| Sets mode to display complex results only when you enter complex <br> numbers. |
| M0DE |
| Real |

| real( |  |
| :--- | ---: |
| real(value) | [MATH] |
| Returns the real part of a complex number or list of complex numbers. | 2:real( |

## RecallGDB

## RecallGDB $n$

2nd [DRAW] STO
Restores all settings stored in the graph database variable GDB $n$.
4:RecalIGDB

| RecallPic | 2nd [DRAW] |
| :--- | ---: |
| RecallPic $n$ | STO |
| Displays the graph and adds the picture stored in Pic $n$. | 2:RecallPic |

## Rect

complex value $\boldsymbol{\nabla}$ Rect
Displays complex value or list in rectangular format.
MATH
CMPLX
6: Rect

| RectGC |  |
| :--- | ---: |
| RectGC | † 2nd |
| Sets rectangular graphing coordinates format. | [FORMAT] |

[,listname1,listname2,freqlist1,freqlist2,confidence level])

+ STAT
TESTS 9:2-SampZInt(

Computes a two-sample $z$ confidence interval.

## 2-SampZInt(

| 2-SampZInt( $\sigma_{1}, \sigma_{2}, \bar{x} 1, n 1, \bar{x} 2, n 2[$, confidence level $]$ ) | + STATT |
| :--- | ---: |
| (Summary stats input) | TESTS |
| Computes a two-sample $z$ confidence interval. | 9:2-SampZInt( |

[^0]
## 2-SampZTest(

| 2-SampZTest $\left(\sigma_{1}, \sigma_{2}\right.$ | + STAT |
| :--- | ---: |
| $[$, | TESTS |
| listname1 | 3:2-SampZTest( |

'listname2
,freqlist 1,freqlist2,alternative,drawflag,color\#])
Computes a two-sample $z$ test. alternative $=-\mathbf{1}$ is <; alternative $=\mathbf{0}$ is
; alternative $\mathbf{= 1}$ is >. drawflag=1 draws results; drawflag=0
calculates results.
Color\#: 10-24 or color name pasted from [vars] COLOR.

## 2-SampZTest(

2-SampZTest $\left(\sigma_{1}, \sigma_{2}, \overline{\mathrm{x}} 1, n 1, \overline{\mathrm{x}} 2, n 2\right.$
[,alternative,drawflag,color\#])

+ STAT
TESTS
3:2-SampZTest(
Computes a two-sample $z$ test. alternative $=\mathbf{- 1}$ is <; alternative $=\mathbf{0}$ is ; alternative $=\mathbf{1}$ is $>$. drawflag $=\mathbf{1}$ draws results; drawflag=0 calculates results.

Color\#: 10-24 or color name pasted from [vars] COLOR.

| Scatter |  |
| :--- | ---: |
| Scatter Plot\#(type,Xlist,[,freqlist,color\#]) | 2nd][stat plot] |
| Used as the "type" argument in the command | TYPE |
| Where \# gives Plot1, Plot2 or Plot3. |  |

| Sci |  |
| :--- | ---: |
| Sci | $+\frac{\text { MODE }}{}$ |
| Sets scientific notation display mode. | $\mathbf{S C I}$ |

| Select( |  |
| :--- | ---: |
| Select(Xlistname, Ylistname) | 2nd [ [LIST] |
| Selects one or more specific data points from a scatter plot or xyLine OPS <br> plot (only), and then store's the selected data points to two new  <br> lists, Xlistname and Ylistname. 8:Select( |  |

Send(
Send(string)

+ PRGM
Sends one or more TI-Innovator ${ }^{\text {TM }}$ Hub commands to a connected I/O hub.

## Notes:

See also eval( and Get ( command related to the Send( command.
TI-Innovator ${ }^{\text {rTM }}$ Hub commands are supported in the HUB submenu in the CE OS v.5.2 program editor.

|  | TI- <br> Innovator™ |
| :--- | ---: |
| Send( | Hub |
| Send(string) | + PRGM |
| Sends one or more TI-Innovatorm |  |
| Hub commands to a connected hub. | HUB |

Notes:
See also eval( and Get ( command related to the Send ( command.
TI-Innovator ${ }^{\text {TM }}$ Hub commands are supported in the HUB submenu in the CE OS v.5.2 program editor.

See menu
location depending on TIInnovator Hub sensors.

| seq( |  |
| :--- | ---: |
| seq(expression, variable, begin,end[,increment]) | 2nd [LIST] |
| Returns list created by evaluating expression with regard to | OPS |
| variable, from begin to end by increment. | 5:seq( |

| SEQ $(n)$ |
| :--- |
| Seq $(n)$ |
| In sequence mode, SEQ $(n)$ sets the sequence editor type to enter <br> sequence functions, $u, v$, or $w$, as a function of the independent variable <br> $n$. Can also be set from the $Y=$ editor in SEQ mode. |

| SEQ $(n+1)$ |
| :--- |
| Seq $(n+1)$ |
| In sequence mode, $\operatorname{SEQ}(n+1)$ sets the sequence editor type to enter <br> sequence functions, $u, v$, or $w$, as a function of the independent variable <br> $n+1$. Can also be set from the $Y=$ editor in $\operatorname{SEQ}$ mode. |

SEQ $(n+2)$
$\operatorname{Seq}(n+2)$

+ MODE
In sequence mode, $\operatorname{SEQ}(n+2)$ sets the sequence editor type to enter sequence functions, $u, v$, or $w$, as a function of the independent variable $\operatorname{SEQ}(n+2)$ $n+2$. Can also be set from the $Y=$ editor in SEQ mode.

| mal float huto keal radian mp aŋ | Note: "Type" will NOT be included in the TIC CE PE syntax |
| :---: | :---: |
| CATALOG |  |
| Send | On the device, "Type" does not paste and is similar to how the device displays, for example, DEC Answers where Answers appears in [catalog] but does not paste. |

| setDtFmt ( |  |

| Seq |  |
| :--- | ---: |
| Seq | $+\boxed{\text { MODE }}$ |
| Sets sequence graphing mode. | Seq |

## Sequential

Sequential
Sets mode to graph functions sequentially.
setDate(
setDate(year,month,day)
2nd [CATALOG] setDate(
Sets the date using a year, month, day format. The year must be 4
digits; month and day can be 1 or 2 digit.

## setDtFmt(

setDtFmt(integer)
2nd
[CATALOG]
Sets the date format. setDtFmt(
$1=M / D / Y$
$2=\mathrm{D} / \mathrm{M} / \mathrm{Y}$
$3=Y / M / D$

## setTime(

setTime(hour,minute, second)

2nd [CATALOG] setTime(

Sets the time using an hour, minute, second format. The hour must be in 24 hour format, in which $13=1$ p.m.

## setTmFmt(

setTmFmt(integer)

2nd [CATALOG] setTmFmt(

Sets the time format.
$12=12$ hour format
$24=24$ hour format

## SetUpEditor

| SetUpEditor | STAT] |
| :--- | ---: |
| Removes all list names from the stat list editor, and then restores list | EDIT |
| names L1 through L6 to columns $\mathbf{1}$ through $\mathbf{6 .}$ | 5:SetUpEditor |

## SetUpEditor

SetUpEditor listname 1[,listname2,...,listname20]
Removes all list names from the stat list editor, then sets it up to display one or more listnames in the specified order, starting with

## Shade $\chi^{2}$ (

Shade $\chi^{2}$ (lowerbound,upperbound,df $\lfloor$,color\#])
Draws the density function for the $\chi^{2}$ distribution specified by degrees of freedom $d f$, and shades and colors the area between lowerbound and upperbound.

Color\#: 10-24 or color name pasted from [vars] COLOR.

## Shade F(

ShadeF
2nd [DISTR]
(lowerbound,upperbound,numerator df,denominator dfl,color\#])

DRAW

Draws the density function for the $F$ distribution specified by numerator $d f$ and denominator $d f$ and shades and colors the area between lowerbound and upperbound.
Color\#: 10-24 or color name pasted from [vars] COLOR.

## ShadeNorm(

ShadeNorm(lowerbound,upperbound $[, \mu, \sigma$, color\# $]$ )
Draws the normal density function specified by $\mu$ and $\sigma$ and shades and colors the area between lowerbound and upperbound.
Color\#: 10-24 or color name pasted from [vars] COLOR.

| Shade_t( | 2nd [DISTR] |
| :--- | ---: |
| Shade_t (lowerbound,upperbound,dfl, color\#]) | DRAW |
| Draws the density function for the Student-t distribution specified by <br> degrees of freedom df, and shades or colors the area between <br> lowerbound and upperbound. | 2:Shade_t( |

Color\#: 10-24 or color name pasted from [vars] COLOR.

| Simul |  |
| :--- | ---: |
| Simul | + MODE |
| Sets mode to graph functions simultaneously. | Simul |

| $\sin ($ |
| :--- |
| $\boldsymbol{\operatorname { s i n }}($ value $)$ |
| SIN |

Returns the sine of a real number, expression, or list.

| $\sin ^{-1}($ |  |
| :--- | :--- |
| $\boldsymbol{\operatorname { s i n }}^{-1}($ value $)$ | 2nd [SIN-1] |

Returns the arcsine of a real number, expression, or list.

## $\sinh ($

$\sinh ($ value $)$
2nd [CATALOG]
Returns the hyperbolic sine of a real number, expression, or list.

```
sinh}\mp@subsup{}{}{-1
sinh}\mp@subsup{}{}{-1}\mathrm{ (value)
```

Returns the hyperbolic arcsine of a real number, expression, or list.

## SinReg

SinReg
[iterations,Xlistname,Ylistname,period,regequ]
Attempts iterations times to fit a sinusoidal regression model to C:SinReg Xlistname and Ylistname using a period guess, and stores the regression equation to regequ.

| SortA( |  |
| :--- | ---: |
| SortA(listname) | 2nd [LIST] |
| Sorts elements of listname in ascending order. | OPS |
|  | 1:SortA( |

## SortA(

SortA(keylistname,dependlist 1 2nd [LIST]
[,dependlist $2, . . .$, dependlist $n$ ]) OPS

Sorts elements of keylistname in ascending order, then sorts each 1:SortA( dependlist as a dependent list.

| SortD( |  |
| :--- | ---: |
| SortD(listname) | 2nd [LIST] |
| Sorts elements of listname in descending order. | OPS |
|  | 2:SortD( |

## SortD(

SortD(keylistname,dependlist $1[$, dependlist $2, \ldots$, 2nd [LIST] dependlist $n$ ]) OPS

Sorts elements of keylistname in descending order, then sorts each 2:SortD( dependlist as a dependent list.

## startTmr

## startTmr

2nd [CATALOG]
startTmr
Starts the clock timer. Store or note the displayed value, and use it as the argument for checkTmr( ) to check the elapsed time.

## STATWIZARD OFF

## STATWIZARD OFF

2nd [CATALOG]
Disables wizard syntax help for statistical commands, distributions, and STATWIZARD OFF

| STATWIZARD ON |  |
| :--- | ---: |
| STATWIZARD ON | 2nd [CATALOG] |
| Enables wizard syntax help for statistical commands, distributions, and <br> seq(. | STATWIZARD |

| stdDev(list[,freqlist]) | 2nd [LIST] |
| :---: | :---: |
| Returns the standard deviation of the elements in list with frequency freqlist. | MATH <br> 7:stdDev( |

| Stop | + PRGM |
| :--- | ---: |
| Stop | CTL |
| Ends program execution; returns to home screen. | F:Stop |

Store $\rightarrow$
Store: value $\rightarrow$ variable

Stores value in variable.

## StoreGDB

| StoreGDB $n$ | 2nd [DRAW] |
| :--- | ---: |
| Stores current graph in database GDB $n$. | STO |

| StorePic |  |
| :--- | ---: |
| StorePic $n$ | 2nd [DRAW] |
| Stores current picture in picture Picn. | STO |
|  | 1:StorePic |

## String) Equ(

String $\boldsymbol{E q u}($ string, $\mathbf{Y}=v a r$ )

\author{

+ PRGM <br> 1/0
}

Converts string into an equation and stores it in $\mathrm{Y}=\mathrm{var}$.
string can be a string or string variable.
String〉Equ( is the inverse of Equ>String(.

```
sub(
sub(string,begin,length)
Returns a string that is a subset of another string, from begin to length.
```

| sum( |  |
| :--- | ---: |
| $\operatorname{sum}($ list $[$,start,end $]$ ) | 2nd [LIST] |
| Returns the sum of elements of list from start to end. | MATH |
|  | 5:sum( |

| $\Sigma$ (expression[,start,end]) | MATH |
| :---: | :---: |
| Classic command as shown. | NUM |
| In MathPrint ${ }^{\text {TM }}$ the summation entry template displays and returns the sum of elements of list from start to end, where start $<=$ end | 0 : summation $\Sigma($ |

$T$
$\boldsymbol{\operatorname { t a n } (})$
$\boldsymbol{\operatorname { t a n } ( \text { value } )}$
Returns the tangent of a real number, expression, or list. TAN
$\tan ^{-1}($

Returns the arctangent of a real number, expression, or list.

Tangent(
Tangent(expression,value[, color\#,linestyle\#])
Draws a line tangent to expression at $\mathbf{X}=v$ alue with specified color \#: 10-24 and line style linestyle \#: 1-2.

Colort: 10-24 or color name pasted from [vars] COLOR.

## tanh (

$\tanh$ (value)
Returns hyperbolic tangent of a real number, expression, or list.
$\tanh ^{-1}($
$\tanh ^{-1}$ (value)

Returns the hyperbolic arctangent of a real number, expression, or list.

## tcdf( <br> tcdf(lowerbound,upperbound, $d f$ )

Computes the Student- $t$ distribution probability between lowerbound and upperbound for the specified degrees of freedom $d f$.

| Text( |  |
| :---: | :---: |
| Text(row,column,text 1, text $2, \ldots$, text $n$ ) | 2nd [DRAW] |
|  | DRAW |
| 164 and 0 column 264. | 0:Text( |
| Full mode, row must be <=148; column must be 256 |  |
| Horiz mode, row must be row<=66 and column must be <=256 |  |
| G-T mode, row must be row <=126; column must be 176 |  |
| TextColor |  |
| TextColor([color\#] | + 2nd |

TextColor(
Set text color prior to using the Text( command.
Colort: $10-24$ or color name pasted from [vars] color.

[DRAW]
DRAW

## Then

## Then

See If:Then

## Thick

| Thick | + MODE |
| :--- | :---: |
| Resets all $Y=$ editor line-style settings to Thick. | Thick |

| Thin |  |
| :--- | ---: |
| Thin MODE |  |
| Resets all $Y$ =editor line-style settings to Thin. | Thin |

## Time

## Time

Sets sequence graphs to plot with respect to time.

+ 2nd
[FORMAT]
Time
timeCnv(
timeCnv(seconds)
Converts seconds to units of time that can be more easily understood for evaluation. The list is in \{days, hours, minutes, seconds\} format.

TInterval

| TInterval [listname,freqlist,confidence level] | + STAT |
| :--- | ---: |
| (Data list input) | TESTS |
| Computes a $t$ confidence interval. | $\mathbf{8 : T I n t e r v a l ~}$ |

TInterval $\overline{\mathrm{x}}, S x, n[$, confidence level $]$
(Summary stats input)
Computes a $t$ confidence interval.

## toString(

toString((value[,format]) † PRGM

Converts value to a string where value can be real, complex, an evaluated expression, list, or matrix. String value displays in classic format (0) following the mode setting AUTO/DEC or in decimal format (1).

| tpdf( | 2nd [DISTR] |
| :--- | ---: |
| tpdf( $x, d f$ ) | DISTR |
| Computes the probability density function (pdf) for the Student- $t$ | 5:tpdf( |

## Trace

Trace TRACE

Displays the graph and enters TRACE mode.

## T-Test

T-Test $\mu 0$ $\dagger$ STAT
[,listname,freqlist,alternative,drawflag,color\#]) TESTS (Data list input)

2:T-Test
Performs a $t$ test with frequency freq list. alternative $=-1$ is $<$; alternative $=\mathbf{0}$ is ; alternative $=\mathbf{1}$ is $>$. drawflag $=\mathbf{1}$ draws results; drawflag $=\mathbf{0}$ calculates results.

Color\#: 10-24 or color name pasted from [vars] COLOR.

## T-Test

T-Test $\mu 0, \bar{x}, S x, n[$, alternative,drawflag,color\#])

+ STAT
TESTS
Performs a $t$ test with frequency freq list. alternative $=\mathbf{- 1}$ is <;
alternative $=\mathbf{0}$ is ; alternative $=\mathbf{1}$ is >. drawflag $=\mathbf{1}$ draws results; 2:T-Test drawflag $=\mathbf{0}$ calculates results.

Colort: 10-24 or color name pasted from [vars] COLOR.

## tvm_FV

tvm_FV[(N,I\%,PV,PMT,P/Y,C/Y)]
APPS
Computes the future value.

| tvm_I\% |  |
| :--- | ---: |
| tvm_I $\%[(\mathbf{N}, P V, P M T, F V, P / Y, C / Y)]$ | APPS |
| Computes the annual interest rate. | 1:Finance |
|  | CALC |
|  | 3:tvm_ |
|  | $\mathbf{I} \%$ |

| tvm_N |  |
| :--- | ---: |
| tvm_N $\mathbf{N}(\mathbf{I} \%, P V, P M T, F V, P / Y, C / Y)]$ | APPS |
| Computes the number of payment periods. | 1:Finance |
|  | CALC |
|  | 5:tvm_ $\mathbf{N}$ |

| tvm_Pmt |  |
| :--- | ---: |
| tvm_Pmt[(N,I\%, $P V, F V, P / Y, C / Y)]$ | APPS |
| Computes the amount of each payment. | 1:Finance |
|  | CALC |
|  | 2:tvm_- |
|  | Pmt |

| tvm_PV |  |
| :--- | ---: |
| tvm_PV $[(\mathbf{N}, \mathrm{I} \%, P M T, F V, P / Y, C / Y)]$ | APPS |
| Computes the present value. | 1:Finance |
|  | CALC |
|  | 4:tvm_PV |

$u$

| UnArchive | 2nd [MEM] |
| :--- | ---: |
| UnArchive variable | 6:UnArchive |
| Moves the specified variables from the user data archive memory to RAM. |  |
| To archive variables, use Archive. |  |

| Un/d |  |
| :--- | ---: |
| Un/d | MATH |
| Displays results as a mixed number, if applicable. | NUM |
|  | C: Un/d |
|  | or |
|  |  |
|  |  |
|  | MATH |
|  | FRAC |
|  | 2:Un/d |

uvAxes
$\left.\begin{array}{l}\text { uvAxes } \\ \text { Sets sequence graphs to plot } \mathbf{u}(n) \text { on the } x \text {-axis and } \mathbf{v}(n) \text { on the } y \text {-axis. } \\ \text { [FORMAT] }\end{array}\right]$

| uwAxes |
| :--- |
| uwAxes |
| Sets sequence graphs to plot $\mathbf{u}(n)$ on the $x$-axis and $\mathbf{w}(n)$ on the $y$-axis. |
| [FORMAT] |
| uw |

## V

## 1-VarStats

1-VarStats [Xlistname,freqlist]
Performs one-variable analysis on the data in Xlistname with frequency freqlist.

STAT<br>CALC<br>1:1-Var Stats

## 2-VarStats

## 2-VarStats [Xlistname,Ylistname,freqlist]

Performs two-variable analysis on the data in Xlistname and Ylistname with frequency freqlist.

STAT<br>CALC<br>2:2-Var Stats

| variance( |  |
| :--- | ---: |
| variance(list $[$, freqlist $]$ ) | 2nd [LIST] |
| Returns the variance of the elements in list with frequency freqlist. | MATH |
|  | 8:variancel |

## Vertical

Vertical $x[$,color\#,linestyle\#]
Draws a vertical line at $x$ with specified color and line style.
Color\#: 10-24 or color name pasted from [vars] COLOR.
line style \#: 1-4.

| vwAxes |
| :--- | ---: |
| vwAxes |
| Sets sequence graphs to plot $\mathbf{v}(n)$ on the $x$-axis and $\mathbf{w}(n)$ on the $y$-axis. |
| [FORMAT] |
| 2nd] |

w
Wait

| Wait time |
| :--- |
| Suspends execution of a program for a given time. Maximum time is 100 <br> seconds. |
| A:Wait |

| Wait | $\begin{array}{r} \text { TI- } \\ \text { Innovator }{ }^{\mathrm{Tm}} \end{array}$ |
| :---: | :---: |
| Wait time | + PRGM |
| Suspends execution of a program for a given time. Maximum time is 100 seconds. | HUB 4:Wait |
| Web |  |
| Web | + 2nd |
| Sets sequence graphs to trace as webs. | [FORMAT] <br> Web |

| :While |  |
| :--- | ---: |
| :Whilecondition:commands | † PRGM |
| :End:command | CTL |
| Executes commands while condition is true. | 5:While |

value $A$ xor value $B$
2nd [TEST]
LOGIC
Returns 1 if only value $A$ or value $B=0$. value $A$ and value $B$ can be real numbers, expressions, or lists.

3:xor

## xyLine

xyLine Plot\#(type, Xlist,[,freqlist,color\#])
$\dagger$
Used as the "type" argument in the command
Where \# gives Plot1, Plot2 or Plot3.
TYPE

Z

ZBox

| ZBox | † ZOOM |
| :--- | ---: |
| Displays a graph, lets you draw a box that defines a new viewing window, | ZOOM |
| and updates the window, | 1:ZBox |

## ZDecimal

ZDecimal

+ ZOOM
ZOOM 4:ZDecimal

Adjusts the viewing window so that TraceStep=0.1, $\Delta \mathrm{X}=\mathbf{0 . 5}$ and $\Delta \mathbf{Y}=\mathbf{0 . 5}$, and displays the graph screen with the origin centered on the screen.

ZFrac1/2
ZFrac1/2
ZOOM
ZOOM
Sets the window variables so that you can trace in increments of $\frac{1}{2}$, if B:ZFrac1/2 possible. Sets TraceStep to ${ }^{\frac{1}{2}}$ and $\Delta \mathbf{X}$ and $\Delta \boldsymbol{Y}$ to ${ }^{\frac{1}{4}}$.

ZFrac1/3
ZFrac1/3
ZOOM
ZOOM
C:ZFrac1/3
Sets the window variables so that you can trace in increments of $\frac{1}{3}$, if possible. Sets TraceStep to ${ }^{\frac{1}{3}}$ and $\Delta \mathbf{X}$ and $\Delta \boldsymbol{Y}$ to ${ }^{\frac{1}{6}}$.

## ZFrac1/4

ZFrac1/4
ZOOM
ZOOM D:ZFrac1/4
Sets the window variables so that you can trace in increments of $\frac{1}{4}$, if possible. Sets TraceStep to ${ }^{\frac{1}{4}}$ and $\Delta \mathbf{X}$ and $\Delta \boldsymbol{Y}$ to ${ }^{\frac{1}{8}}$.

## ZFrac1/5

ZFrac1/5
ZOOM
Sets the window variables so that you can trace in increments of $\frac{1}{5}$, if ZOOM

Sets the window variables so that you can trace in increments of 5 , if E:ZFrac1/5 possible. Sets TraceStep to ${ }^{\frac{1}{5}}$ and $\Delta \mathbf{X}$ and $\Delta \mathbf{Y}$ to $\frac{1}{10}$.

## ZFrac1/8

## ZFrac1/8

ZOOM
ZOOM
Sets the window variables so that you can trace in increments of $\frac{1}{8}$, if F:ZFrac1/8

ZFrac1/10
ZFrac1/10 ZOOM

Sets the window variables so that you can trace in increments of $\frac{1}{10}$, if $\quad$ G:ZFrac1/10 possible. Sets TraceStep to ${ }^{\frac{1}{10}}$ and $\Delta \mathbf{X}$ and $\Delta \mathbf{Y}$ to ${ }^{\frac{1}{20}}$.

## ZInteger

| ZInteger | $\dagger$ ZOOM |
| :--- | ---: |
| Redefines the viewing window using the following dimensions: | ZOOM |
| TraceStep=1, $\Delta \mathbf{X}=\mathbf{0 . 5}, \mathbf{X s c l = 1 0 , ~} \Delta \mathbf{Y}=\mathbf{1}, \mathrm{Y}$ scl=10. | 8:ZInteger |

## ZInterval

| ZIntervalo[,listname,freqlist,confidence level $]$ | + STAT |
| :--- | ---: |
| (Data list input) | TESTS |
| Computes a $z$ confidence interval. | 7:ZInterval |

| ZInterval |  |
| :--- | ---: |
| $\left.\begin{array}{lr}\text { ZInterval } \sigma, \bar{x}, n[, \text { confidence level] } & \text { †STAT } \\ \text { (Summary stats input) } & \text { TESTS } \\ \text { Computes a } z \text { confidence interval. } & \text { 7:ZInterval }\end{array}\right]$ |  |

| Zoom In |  |
| :---: | :---: |
| Zoom In | + ZOOM |
| Magnifies the part of the graph that surrounds the cursor location. | ZOOM |
| Magnies the part of graph that surrunds the cursorlocation. | 2:Zoom In |

| Zoom Out | + ZOOM |
| :--- | ---: |
| Zoom Out | ZOOM |
| Displays a greater portion of the graph, centered on the cursor location. | 3:Zoom Out |

| ZoomFit | † ZOOM |
| :--- | ---: |
| ZoomFit | ZOOM |
| Recalculates Ymin and Ymax to include the minimum and maximum Y | $\mathbf{0 : Z o o m F i t}$ |
| values, between Xmin and Xmax, of the selected functions and replots |  | the functions.

| ZoomRcl |  |
| :--- | ---: |
| ZoomRcl | †ZOOM |
| Graphs the selected functions in a user-defined viewing window. | MEMORY |
|  | 3:ZoomRcl |

## ZoomStat

ZoomStat
Redefines the viewing window so that all statistical data points are displayed.

ZoomSto
ZoomSto

+ ZOOM
Immediately stores the current viewing window.
MEMORY
2:ZoomSto

## ZPrevious

ZPrevious

+ ZOOM
Replots the graph using the window variables of the graph that was displayed before you executed the last ZOOM instruction.

## ZQuadrant1

ZQuadrant1
ZOOM
Displays the portion of the graph that is in quadrant 1.
ZOOM
A:ZQuadrant1

| ZSquare | + ZOOM |
| :--- | ---: |
| ZSquare | ZOOM |
| Adjusts the $X$ or $\mathbf{Y}$ window settings so that each pixel represents an <br> equal width and height in the coordinate system, and updates the <br> viewing window. | $5: Z S q u a r e$ |

| ZStandard |  |
| :--- | ---: |
| ZStandard | †ZOOM <br> Replots the functions immediately, updating the window variables to the <br> default values. |
| 6:ZStandard |  |

| Z-Test( |  |
| :--- | ---: |
| Z-Test( $\mu 0, \sigma$ | † STATT |
| [,listname,freqlist,alternative,drawflag,color\#]) | TESTS |
| (Data list input) | 1:Z-Test( |
| Performs a $z$ test with frequency freqlist.alternative $=-1$ is $<;$ |  |

## Z-Test(

alternative $=\mathbf{0}$ is ; alternative $=\mathbf{1}$ is $>$. drawflag=1 draws results;
drawflag=0 calculates results.
Color\#: 10-24 or color name pasted from [vars] COLOR.

## Z-Test(

| Z-Test $(\mu 0, \sigma, \overline{\mathrm{x}}, n[$, alternative,drawflag, color\# $\#)$ | 世 STAT |
| :--- | ---: |
| (Summary stats input) | TESTS |
| Performs a $z$ test. alternative $=-1$ is <; alternative $=0$ is ; | 1:Z-Test( |

Performs a $z$ test. alternative $=\mathbf{- 1}$ is <; alternative $=\mathbf{0}$ is ; 1:Z-Test(
alternative $=\mathbf{1}$ is $>$.drawflag=1 draws results; drawflag=0 calculates results.

Color\#: 10-24 or color name pasted from [vars] COLOR.

| ZTrig | † ZOOM |
| :--- | ---: |
| ZTrig | ZOOM |
| Replots the functions immediately, updating the window variables to <br> preset values for plotting trig functions. | 7:ZTrig |

## Arithmetic Operations, Test Relations, and Symbols

| ! (factorial) |  |
| :--- | :---: |
| Factorial: value [ MATH |  |
| Returns factorial of value. | PRB |
|  | $4:!$ |

## ! (factorial)

Factorial: list ! MATH
Returns factorial of list elements. PRB
4:!

## ${ }^{\circ}$ (degrees notation)

Degrees notation: value ${ }^{\circ}$
Interprets value as degrees; designates degrees in DMS format.
${ }^{r}$ (radian)
Radian: angle ${ }^{\mathbf{r}}$
2nd [ANGLE]
ANGLE
Interprets angle as radians.
3: ${ }^{\text {r }}$

## T (transpose)

Transpose: matrix ${ }^{\mathbf{\top}}$
Returns a matrix in which each element (row, column) is swapped with the corresponding element (column, row) of 2: ${ }^{\top}$ matrix.

| $x_{\sqrt{ }}$ |  |
| :---: | :---: |
| $x^{\text {th }}$ root ${ }^{\mathbf{x}} \sqrt{\text { value }}$ | MATH |
| Returns $x^{\text {th }}$ root of value. | $\overline{\text { MATH }}$ |

$$
\begin{aligned}
& \mathbf{x} \sqrt{( } \\
& x^{\text {th }} \text { root } \sqrt{\text { x }} \sqrt{\text { list }}
\end{aligned}
$$

## $x_{\sqrt{1}}$

list $^{\mathbf{x}} \sqrt{\text { value }}$
Returns list roots of value.

## $x_{\sqrt{1}}$

list $A \sqrt{\mathbf{x}} \sqrt{\text { list }}$ B
Returns listA roots of listB.

## 3 (cube)

Cube: value ${ }^{3}$
MATH
Returns the cube of a real or complex number, expression, list, or square matrix.

MATH
3: ${ }^{3}$

## $\sqrt[3]{( }$ (cube root)

Cube root: $\sqrt[3]{(\text { value })}$
Returns the cube root of a real or complex number, expression, or list.

Returns 1 if value $=$ valueB. Returns 0 if value $A$ value $B$. value $A$ and valueB can be real or complex numbers, expressions, lists, or matrices.

```
# (not equal)
```

Not equal:
value $A \neq$ value $B$
Returns 1 if value $A \neq v a l u e B$. Returns 0 if value $A=v a l u e B$. expressions, lists, or matrices.

## < (less than)

Less than:
value $A<$ value $B$
Returns 1 if value $A$ valueB. Returns 0 if value $A \geq$ value $B$.

## $>$ (greater than)

| Greater than: | 2nd [TEST] |
| :--- | ---: |
| value $A>$ value $B$ | TEST |

Returns 1 if value $\gg$ valueB. Returns 0 if value $A \leq v a l u e B$.

Returns 1 if value $A \leq$ valueB. Returns 0 if value $\gg$ value $B$. value $A$ and value $B$ can be real or complex numbers, expressions, or lists.

## $\geq$ (greater or equal)

Greater than or equal:
value $A \geq$ value $B$
Returns 1 if value $A \geq$ value $B$. Returns 0 if value $A$ value $B$. value $A$ and value $B$ can be real or complex numbers, expressions, or lists.

```
-1 (inverse)
Inverse: value-1
    x-1
Returns 1 divided by a real or complex number or expression.
```

## -1 (inverse)

Inverse: list $^{-1}$
Returns 1 divided by list elements.

## ${ }^{-1}$ (inverse)

Inverse: matrix $^{-1}$
Returns matrix inverted.

## 2 (square)

Square: value ${ }^{\mathbf{2}}$
Returns value multiplied by itself. value can be a real or complex number or expression.

## 2 (square)

## Square: list $^{\mathbf{2}}$

Returns list elements squared.

## 2 (square)

Square: matrix $^{\mathbf{2}}$
Returns matrix multiplied by itself.
$\wedge$ (power)
Powers: value^power

Returns value raised to power. value can be a real or complex number or expression.
$\wedge$ (power)
Powers: list^power
Returns list elements raised to power.

Returns value raised to list elements.
$\wedge$ (power)
Powers: matrix^ ${ }^{\wedge}$ power

Powers: matrix^power
Returns matrix elements raised to power.

```
- (negation)
```

Negation: -value (-)]

Returns the negative of a real or complex number, expression, list, or matrix.

## 10^( (power of ten)

Power of ten: 10^(value)
Returns 10 raised to the value power. value can be a real or complex number or expression.

## $\mathbf{1 0}^{\wedge}$ ( (power of ten)

Power of ten: $\mathbf{1 0}^{\wedge}$ (list)
2nd [ $10^{x}$ ]
Returns a list of 10 raised to the list

## $\sqrt{ }$ ( square root)

Square root: $\sqrt{(\text { value })}$
2nd [ $v$ ]
Returns square root of a real or complex number, expression, or list.

* (multiply)

Multiplication:

Returns value $A$ times valueB.

## * (multiply)

Multiplication:

```
* (multiply)
value*list
```

Returns value times each list element．

* (multiply)

Multiplication:

区

list*value

Returns each list element times value.

* (multiply)
Multiplication:
区
list $A *$ list $B$

Returns list $A$ elements times list $B$ elements．

## ＊（multiply）

Multiplication：
value＊matrix
Returns value times matrix elements．

## ＊（multiply）

Multiplication：
matrix $A *$ matrix $B$
Returns matrixA times matrixB．
／（divide）
Division：valueA／valueB

Division：value $/$／value $B$
Returns value $A$ divided by valueB
／（divide）
Division： list／value

Returns list elements divided by value．
／（divide）
Division：value／list

## (divide)

Returns value divided by list elements.

## (divide)

Division: listA/listB
$\div$
Returns list $A$ elements divided by list $B$ elements.

```
+ (add)
```

Addition: value $A+v a l u e B$
$\dagger$
Returns value $A$ plus valueB.

## + (add)

Addition: list + value
$\oplus$
Returns list in which value is added to each list element.

## + (add)

Addition: list $A+$ list $B$
$\pm$

Returns list $A$ elements plus list $B$ elements.

```
+ (add)
```

## Addition:

matrix $A+$ matrix $B$
Returns matrix $A$ elements plus matrix $B$ elements.

```
+ (concatenation)
```

## Concatenation:

$+$
string1+string2
Concatenates two or more strings.

## - (subtract)

Subtraction:
value $A$-valueB
Subtracts valueB from value $A$.

```
- (subtract)
Subtraction:
value-list
```

Subtracts list elements from value

- (subtract)

Subtraction:
list-value
Subtracts value from list elements.

- (subtract)
Subtraction:
list $A$-list $B$
Subtracts list $B$ elements from list $A$ elements.
- (subtract)

Subtraction:
matrixA-matrix $B$
Subtracts matrix $B$ elements from matrix $A$ elements.

## ' (minutes notation)

| Minutes notation:degrees ${ }^{\circ}$ minutes' | 2nd [ANGLE] |
| :--- | ---: |
| seconds" | ANGLE |
| Interprets minutes angle measurement as minutes. | $\mathbf{2 : '}$ |

## " (seconds notation)

Seconds notation:
ALPHA ['I] degrees ${ }^{\circ}$ minutes'seconds"

Interprets seconds angle measurement as seconds.

## Error Messages

When the TI-84 Plus CE detects an error, it returns an error message as a menu title, such as ERR:SYNTAX or ERR:DOMAIN. This table contains each error type, possible causes, and suggestions for correction. The error types listed in this table are each preceded by ERR: on your graphing calculator display. For example, you will see ERR:ARCHIVED as a menu title when your graphing calculator detects an ARCHIVED error type.

| ERROR TYPE | Possible Causes and Suggested Remedies |
| :--- | :--- |
| ARCHIVED | You have attempted to use, edit, or delete an archived <br> variable. For example, the expression dim(L1) produces an <br> error if L1 is archived. |
| ARCHIVE | You have attempted to archive a variable and there is not <br> enough space in archive to receive it. |
| FULL | A function or instruction does not have the correct number <br> of arguments. <br> The arguments are shown in italics. The arguments in <br> brackets are optional and you need not type them. You <br> must also be sure to separate multiple arguments with a <br> comma (,). For example, stdDev(list [freqlist ]) might be <br> entered as stdDev(L1) or stdDev(L1,L2) since the frequency <br> list or freqlist is optional. |
| BAD | You have attempted to send or receive an application and <br> an error ( (e.g. electrical interference) has occurred in the <br> transmission. |
| ADDRESS |  |

| ERROR TYPE | Possible Causes and Suggested Remedies |
| :---: | :---: |
|  | required. |
|  | In an editor, you entered a type that is not allowed, such as a matrix entered as an element in the stat list editor. |
|  | You attempted to store an incorrect data type, such as a matrix, to a list. |
|  | You attempted to enter complex numbers into the $n / d$ MathPrint ${ }^{\text {TM }}$ template. |
| DIMENSION MISMATCH | Your calculator displays the ERR:DIMENSION MISMATCH error if you are trying to perform an operation that references one or more lists or matrices whose dimensions do not match. For example, multiplying L1*L2, where L1= $\{1,2,3,4,5\}$ and $\mathrm{L} 2=\{1,2\}$ produces an ERR:DIMENSION MISMATCH error because the number of elements in L1 and L2 do not match. |
|  | You may need to turn Plots Off to continue. |
| DIVIDE BY 0 | You attempted to divide by zero. This error is not returned during graphing. The TI-84 Plus CE allows for undefined values on a graph. <br> - You attempted a linear regression with a vertical line. |
| DOMAIN | You specified an argument to a function or instruction outside the valid range. The TI-84 Plus CE allows for undefined values on a graph. |
|  | You attempted a logarithmic or power regression with a $-\mathbf{X}$ or an exponential or power regression with a $-\mathbf{Y}$. |
|  | You attempted to compute $\Sigma \operatorname{Prn}$ ( or $\Sigma \operatorname{Int}($ with pmt 2 <pmt 1 . |
| DUPLICATE | You attempted to create a duplicate group name. |
| Duplicate Name | A variable you attempted to transmit cannot be transmitted because a variable with that name already exists in the receiving unit. |
| EXPIRED | You have attempted to run an application with a limited trial period which has expired. |
| Error in Xmit | The TI-84 Plus CE was unable to transmit an item. Check to see that the cable is firmly connected to both units and that the receiving unit is in receive mode. |
|  | You pressed $0 \times$ to break during transmission. |
|  | Setup RECEIVE first and then SEND, when sending files ([LINK]) between graphing calculators. |
| ID NOT FOUND | This error occurs when the SendID command is executed but the proper graphing calculator ID cannot be found. |
| ILLEGAL | You attempted to use an invalid function in an argument to |

| ERROR TYPE | Possible Causes and Suggested Remedies |
| :---: | :---: |
| NEST | a function, such as seq( within expression for seq(. |
| INCREMENT | The increment, step, in seq( is 0 or has the wrong sign. . The TI-84 Plus CE allows for undefined values on a graph. The increment in a For (loop is 0. |
| INVALID | You attempted to reference a variable or use a function where it is not valid. For example, $\mathbf{Y} n$ cannot reference $\mathbf{Y}$, Xmin, $\Delta X$, or TblStart. |
|  | In Seq mode, you attempted to graph a phase plot without defining both equations of the phase plot. |
|  | In Seq mode, you attempted to graph a recursive sequence without having input the correct number of initial conditions. |
|  | In Seq mode, you attempted to reference terms other than $(n-1)$ or ( $n-2$ ). |
|  | You attempted to designate a graph style that is invalid within the current graph mode. |
|  | You attempted to use Select( without having selected (turned on) at least one xyLine or scatter plot. |
| INVALID DIMENSION | The ERR:INVALID DIMENSION error message may occur if you are trying to graph a function that does not involve the stat plot features. The error can be corrected by turning off the stat plots. To turn the stat plots off, press 2nd [STAT PLOT] and then select 4:PlotsOff. |
|  | You specified a list dimension as something other than an integer between 1 and 999. |
|  | You specified a matrix dimension as something other than an integer between 1 and 99. |
|  | You attempted to invert a matrix that is not square. |
| ITERATIONS | The solve( function or the equation solver has exceeded the maximum number of permitted iterations. Examine a graph of the function. If the equation has a solution, change the bounds, or the initial guess, or both. |
|  | irr( has exceeded the maximum number of permitted iterations. |
|  | When computing I\%, the maximum number of iterations was exceeded. |
| LABEL | The label in the Goto instruction is not defined with a Lbl instruction in the program. |
| LINK L1 (or any other file) to Restore | The calculator has been disabled for testing. To restore full functionality, use TI Connect ${ }^{\text {TM }}$ CE software to download a file to your calculator from your computer, or transfer any file to your calculator from another TI-84 Plus CE. |

| ERROR TYPE | Possible Causes and Suggested Remedies |
| :--- | :--- |
| MEMORY | Memory is insufficient to perform the instruction or <br> function. You must delete items from memory before <br> executing the instruction or function. <br> Recursive problems return this error; for example, graphing <br> the equation Y1=Y1. |
|  | Branching out of an If/Then, For(, While, or Repeat loop <br> with a Goto also can return this error because the End <br> statement that terminates the loop is never reached. |
|  | Attempting to create a matrix with larger than 400 cells. <br> You are unable to transmit an item because the receiving |
| MemoryFull | Ynit's available memory is insufficient. You may skip the <br> item or exit receive mode. |
|  | During a memory backup, the receiving unit's available <br> memory is insufficient to receive all items in the sending <br> unit's memory. A message indicates the number of bytes |
| the sending unit must delete to do the memory backup. |  |
| Delete items and try again. |  |

| ERROR TYPE | Possible Causes and Suggested Remedies |
| :--- | :--- |
| SINGULARITY | expression in the solve( function or the equation solver <br> contains a singularity (a point at which the function is not <br> defined). Examine a graph of the function. If the equation <br> has a solution, change the bounds or the initial guess or <br> both. |
|  | You attempted a stat calculation with lists that are not <br> appropriate. |
| Statistical analyses must have at least two data points. |  |

| ERROR TYPE | Possible Causes and Suggested Remedies |
| :---: | :---: |
|  | OS. TI-84 Plus CE and TI-84 Plus share programs but a version error will be given if any new $\mathrm{TI}-84$ Plus CE programs may need to be adjusted for the high resolution graph area. |
| WINDOW RANGE | A problem exists with the window variables. |
|  | You defined Xmax Xmin or Ymax Ymin. |
|  | You defined $\theta$ max $\theta$ min and $\theta$ step > 0 (or vice versa). |
|  | You attempted to define Tstep=0. |
|  | You defined Tmax Tmin and Tstep > 0 (or vice versa). |
|  | Window variables are too small or too large to graph correctly. You may have attempted to zoom to a point that exceeds the TI-84 Plus CE's numerical range. |
| ZOOM | A point or a line, instead of a box, is defined in ZBox. |
|  | A ZOOM operation returned a math error. |

## General Information

## Texas Instruments Support and Service

General Information: North and South America
