

FOAM SOAP VS. LIQUID SOAP BENEFITS

EASE OF USE:

Foam soap is much easier to use than Liquid soap.

- Dispensed Foam is thick and stays on your hands, while Liquid tends to run off your hands and down the drain.
- Foam is pre-lathered and ready to use, while Liquid takes time to lather up and work into your skin.

SOAP USED

PER 1000 HANDWASHINGS

SOAP SAVINGS:

Converting from Liquid to Foam reduces the amount of soap used per handwash.

- Most Liquid Bulk and Bag-In-Box systems dispense 1.5 mL of soap per handwash, while our Foam system only requires 0.75 mL or half the amount.
- The same size refill of Foam soap should provide twice as many handwashes or last twice as long!

WATER SAVINGS:

Converting from Liquid to Foam will also save gallons of water!

- Since Foam is pre-lathered and has lower viscosity, it reduces the lather up and rinse time per handwash by 5 seconds or more.
- An average faucet runs at 50 mL per second, saving 250 mL per handwash (5 seconds x 50 mL = 250 mL)
- You can save 66 gallons of water for every 1,000 handwashes!
(1,000 x 250 mL = 250,000 mL / 3,785 mL per Gal = 66 Gallons)
