

COMMERCIAL RESIN FURNITURE

*Your best value for Food Service & Hospitality!*

Congratulations! You have purchased a table top made from the most advanced wood composite technology! Like millions of end-users worldwide, you will enjoy the value and the quality of this table top. It will perform like natural wood when exposed to the outdoor elements. The shape of the table top may bend to a concave shape when exposed to direct sunlight. A deflection of as much as 3/16" per linear foot of table length can be expected. This is not a manufacturing defect as this deformation will not affect the structural integrity of the table top nor its functionality. It is just the nature of this German engineering molding process which combines the high performance of melamine resin with the strength of advanced wood composites. Ask your local sales representative for more details regarding your specific application. Enjoy!
