

ACRYLIC · PETG · ABS ♦ Care & Use

Delfin produces all of its products with the highest quality materials and the greatest of care. If properly cared for and used in the correct environment, our product will provide a lengthy life of service, while maintaining its superb aesthetic appeal.

CLEANING

- We recommend cleaning plastics with a specialty cleaning product such as Novus® No.1 or Brilliance. It is also possible to safely use a mild solution of soap or detergent and water.
- Do not use window cleaning fluids with ammonia (such as Windex® or Formula 409®), gasoline, denatured alcohol, carbon tetrachloride, or acetone, which will cause the plastics to craze with minute cracks.
- Begin by gently blowing away any loose dust or dirt from the plastic products' surface.
- Apply the specialty cleaning product (or soap and water solution) with a dampened non-abrasive/non-contaminating/lint-free soft cloth, microfiber cloth, or cellulose sponge.
- Rinse well with clean, clear water.
- Blot dry with a chamois, damp cellulose sponge, or microfiber cloth to prevent water spotting.
- Note: Grease, oil, and tar may be removed with a good grade of hexane, naphtha, or kerosene. Be sure to wash these solvents off quickly to prevent damage to the plastic.

PREVENTATIVE CARE

- For a lustrous shine that resists fogging, repels dust, and eliminates static, apply a thin and even coat of Novus® No.1 with a clean, soft cloth.
- To avoid chipping and scratching, do not strike plastic products with or on any hard surface while attempting to remove excess food.
- Avoid dropping your plastic products. Dropping is the primary cause of cracking and chipping.
- Use of sharp tools, such as serrated knives, is not recommended on plastic products.
- Do not use harsh or abrasive cleaners, steel wool, or metal pot scouring pads to remove food or stains.
