

Size Guide: Frozen Beverage

The below chart shows what we have tested each model to be capable of serving per minute, per barrel/freezing cylinder.

<u>Model</u>	<u>8oz</u>	<u>16oz</u>	<u>32oz</u>
6650	3	1.5	1 every 90 seconds
6690	6	3	1
6455	1.5	1 every 90 seconds	1 every 3 minutes
6695	3	1	1 every 2 minutes
6795	4+	2	1

Size is referenced in fluid oz (volume), not weight.

Correctly sizing the machine is important to ensure smooth operation. Dispensing more product than the machine is designed for will cause problems like freeze ups and could cause damage to the machine not covered under warranty.

Note: ambient temperature, machine clearance, and product ingredients may increase or decrease output. Alcohol or high sugar content will increase time needed to freeze product. Ideal Brix should range from 14-18.
