MINI BOTTLER
Re-usable glass bottler I V3-205

- Dispenses chilled, still and sparkling water
- Substantially reduce costs of purchasing pre-bottled mineral waters
- Re-usable glass bottles in 425ml, 500ml, 750ml and 1 liter sizes
- Bottles can be personalized
- Save the environment - eliminate regular deliveries as well as the disposal of empty bottles and packaging
- High performance ice bank refrigeration system capable of delivering very high volumes of chilled water at low temperatures, particularly at peak demand times
- Eliminate any storage issues
- Purpose designed bottle washing trays designed to fit most commercial dishwashers
- Removable tap nozzles for ease of cleaning and sanitizing
- Stainless steel drip tray
Minimum Space Required:
Height 29 1/2”
Width 24”
Depth 24”

Mains Supply 115V 60Hz
Double NEMA 5-15 Socket

Mains Water Supply
Terminate 24” above the floor

Trapped Waste Upstand
Terminate 24” above the floor

1) Front Ventilation
   Showing Ventilation grilles
   cut in a standard door panel

2) Side Ventilation
   Ventilation grilles cut in the side
   of a standard 24" cabinet. The grilles
   may be fitted on either side provided they
   ventilate into a free and unobstructed area.

3) Base Ventilation
   Ventilation grilles cut in the cabinet's
   base panel and base plinth. Top ventilation
   will also be required in either the side panels
   or a cut-out in the top of the door.

4) Base Cutout
   Ventilation can be made to the base of the
   cabinet, with the removal of a narrow section
   of floor, immediately behind the door and trim
   with roll edging strip. Typical cut-out size must
   not be less than 11.0" wide x 1.5" deep

The cabinet may be ventilated in several different ways to prevent
excessive heat build-up. The methods shown all take advantage
of natural circulation by placing two grilles or cut-outs: one near
the base and the other at the top of the enclosure.

VIVREAU grill, shown in a 23.5"
(24") wide door
MINI BOTTLER
North America V3-205 Specification Sheet

Product Dispensed:
Advanced micro-filtered, chilled still and sparkling water

Application:
For the purpose of filling Vivreau re-usable glass bottles

Equipment Dimensions:
- Width 14 ¾”
- Depth 14 ¼”
- Height 23”

Cobra Tap:
- 19 ½” (total tap height mounted) *Maximum Counter thickness for mounting cobra tap 1 ½”

*Minimum Space Required for System:
- Height 29 ½”
- Width 24”
- Depth 24”

Please note that the system is installed as an Under Counter unit. Alternatively it can be installed as a Counter Top system.

Countertop: (alternative option)
System is installed as one unit on the countertop with the dispense taps mounted on the front. Refer to Bottler V3-204 specification sheet.

The following services are required to be supplied by the customer and must be available prior to installation:

- 1 potable 1/2” cold water supply terminating in a ½” ball valve, ½” female pipe thread. (ball valve must be accessible for service and installation)
  *The Vivreau system incorporates back flow prevention, any additional back flow devices required by local or state code must also be supplied by the customer prior to installation. There should not be any other filters/pre-filters before the Vivreau system.
- Minimum water pressure 50 PSI
- Minimum water flow 80 Gallons per hour
• 15amp electrical receptacle (5-15 R) 120v/60hz (8 amps)

• Drip Tray Drain. Customer needs to supply a rigid vertical pipe that drains to a properly trapped drain according to local codes. The vertical pipe for the drip tray drain must be located inside the installation cabinet and must be at least 1 1/4” ID.

• CO2 - (customer supplied) CO2 must be available for installation.

• If the system is to be installed in an enclosed space or cabinet adequate ventilation must be provided (failure to provide ventilation will cause system failure).

  "If connecting to a bulk or existing CO2 system a CO2 line terminating at a ¼” barbed shutoff valve must be available within 40” of the Bottling System installation site, 100psi minimum pressure.

Location of Services: (all services must be accessible for installation and service)

• Please ensure all services are kept within 40” of bottling system

• Water shut-off valve to be located at low level. Please ensure that there is sufficient room for a 12” long fitting to be connected to the shut-off valve.

• Top of waste receptacle should be located a minimum of 6” below the work surface the drip pan will be installed in.

  *The taps must be mounted on the work surface directly above the main system.

Insulation:
Please ensure that all water pipes feeding the Vivreau System are correctly insulated to ensure that the water does not heat up within the pipes prior to entering the Vivreau system. This is essential for water quality reasons.

If the system is to be installed in an enclosed space, adequate ventilation must be provided.
