

# ELECTRIC LAVA PAC® HEATING ELEMENT

## Electric Lava Pac® Heating Element

### SPECIFICATIONS:

#### Outside Dimensions: 13" x 9" x .5"

This patented heating element can capture and hold heat after you unplug due to a layer of PCM (Phase Change Material) built into the design. Once plugged in you will be at maximum temperature in approximately 17 minutes, at which point you can add the hot food load and unplug. Depending on the temperature and type of food load you can expect 2+ hour heat hold performance. It is best to pre-heat element inside of a closed catering bag prior to adding food, and you can also plug the element back in at the event.

This unit is encased in a 2-piece aluminum shell with rivet closure, surrounded with a 200 Denier Nylon cover. It is ETL Certified, weighs 3lbs and draws 2.5amps (115VAC, 60Hertz)
