

VESTURE SMALL CATERING/DELIVERY SYSTEM

Vesture Small Catering/Delivery System

SPECIFICATIONS:

Outside Bag Dimensions: 17.5" x 13.5" x 13"

The flagship product that has been outperforming its competition for decades. The Small TMS (Thermal Management System) is the little brother to the Large TMS and consists of a well-insulated carrying bag, Electric LavaPac heating element, and Microlce cold blanket.

The insulated bag features a top access opening to remove food without losing heat by having to open the larger lid, along with removable rigid wall inserts allowing the bag to collapse for extra storage. The Electric LavaPac heating element can be laid in the floor or leaned up against a wall. Once plugged in for 17 mins, this heating element will hold heat for 2+ hours after food load is added to bag and unplugged. The insulated bag can be used for hot or cold items, and for cold applications we recommend using the Microlce Cold Blanket which is easily frozen and wrapped around any cold food load due its flexible and reusable design.

We offer a commercial grade aluminum cart with folding handle for those times you need to be more mobile with heavier loads.
